In-class Lab 6b: Trees Part B

Due Oct 27 by 11:59pm   **Points** 1   **Submitting** a file upload   **File Types** pdf

Run the code of the tree-introduction.Rmd file and try to apply pruning for different number of leaves of your choice.

After doing your exploration, answer the following questions:

1) Which numbers of leaves did you try?

2) What accuracy did you get for each of them?

3) Which criteria do you use in order to choose which number of leaves to keep/prune? How does the plot of size vs misclassification error help?
